

Manage Graphics & Multimedia Within CM Projects

How We Do It

Revize ONLINE is publication-based. This means that the system's architecture makes it easy to add to and update. As a contributor adds information to the site, the structure of the site actually grows dynamically.

The Revize publication server not only performs basic functions such as replacing text on a page, but it also assembles complex sequences of links and indices, modifying page content and also the related links and structures within the site. Contributors can introduce information into the system without the involvement of the webmaster, making changing and managing the website easy, even for the inexperienced.

What this means for you is that Revize ONLINE provides a flexible and secure system for using all kinds of file formats, including graphic and multimedia. As a result, graphic designers, website creators, content contributors and managers can easily find, edit, and place a plethora of graphic items such as logos, art elements and photos in gif, tif and bmp formats. Contributors can also easily find and place video/audio clips, Adobe Portable Document Format (PDF) files, Macromedia® Flash® (SWF) animations and Windows Media clips into template-based structures that have been pre-defined to reflect the look and feel of your website.

Managed Revisions

Revize ONLINE enables rollback to previous versions of web pages.

This is an important feature because for a variety of reasons contributors often must recover and republish previously created web pages. **Revize ONLINE** supports this essential feature. Similarly, **Revize ONLINE** provides many other critical and useful features, including: content and web page versioning; scheduled publishing and expiration; global workflow; audit trails; search engine application; and attachment of metadata such as key words, titles and descriptions.

Planned Revisions

Pre-defined website themes, cascading style sheets are features that will save hours of work and countless sleepless nights. Without these features, even experienced website designers can apply an incorrect font or misapply a website color to a page. Additionally, **Revize ONLINE** gives you complete control over website navigation tabs, including name, number and position within menus. Further, it supports creation and insertion of custom banners; provides the ability to link to applications on other websites and empowers publication to Internets, Intranets, Extranets and Really Simple Syndication (RSS) news feeds.

Secure Revisions

Revize ONLINE empowers you with the ability to setup content owners/editors and restrict which web pages they are authorized to update. **This means**, you have the power to ensure your site against unauthorized content changes.

We Are the Developers

Wouldn't you rather work with the experts? After all, we have been in the CMS business since it originated and we are the developers of Revize CMS.
