

## software solutions

## product

## description

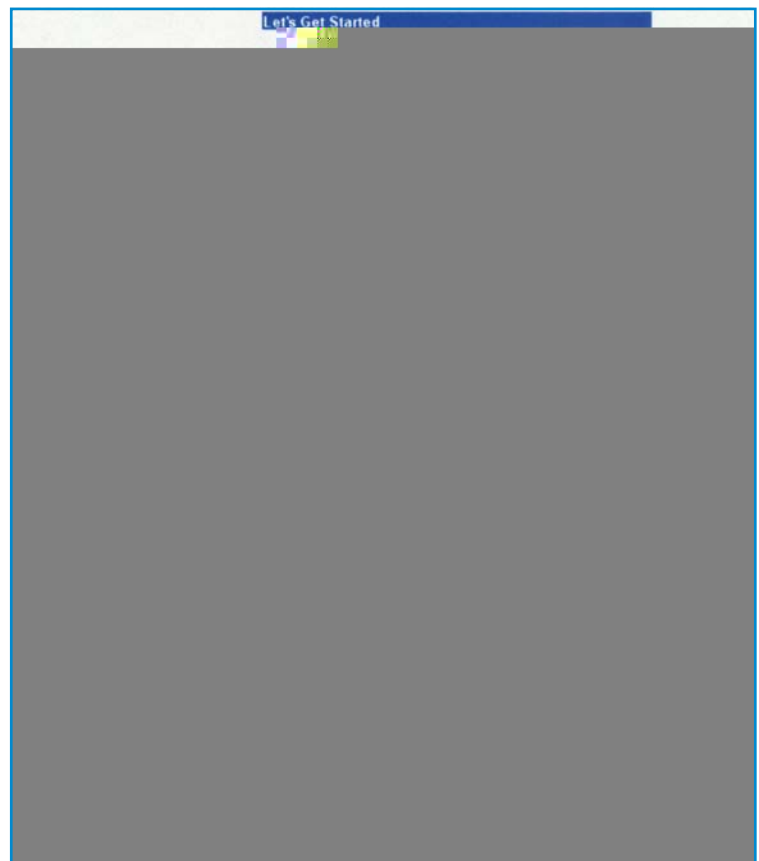

**Create** any web-ready form quickly with FormsForge. Scan your existing form. Then click on a data field type from the dispenser and **drag** it to any area on your pre-scanned form. **Resize** the field to fit the space using resize handles. When you have placed all of the fields on the form, **Lock** them and **Save** the form for later use.

Use the saved form anytime to add data to your database.

Printing your saved forms is easy too. Your forms automatically fill in from your saved data and can be printed on any printer.

## features

- Completely web-based and accessed using Microsoft Internet Explorer 5.x and above.
- Load and display your organization's existing pre-scanned forms for use with the program.
- Dynamically create any entry field you need for your forms along with the supporting MySQL database.
- Click on the available fields list and drag them to any area of the form
- Resize the fields using realtime resize handles
- Specify font, color, and style for each field
- Name and Save your form
- Use your form to enter data into your database
- Query your database from within the program and have the results fill in your forms.
- Print your forms to any system printer
